Lighting can be so much more than the production of lightness. Go new ways. Take color into the darkness, and make light an experience. Colored light.

bocom develops and produces a wide range of products that create and control colored light: state-of-the-art LED colored light sources for the most various purposes and conventional colored light tube technology for particular tasks. With the help of bocom control dynamic color cycles can be realized simply and reliably.

You will find our colored light technology in architecture, stage lighting, in living areas, at fairs and events, in lamps or lights and many other appliances as well as in creative and artistic light objects.

colorPIX stripe 30 fullcolor is an innovative FULLCOLOR LED stripe with 30 x 3,6W RGB fullcolor LEDs.

With fullcolor LEDs it is possible to create 16 million colors.

The advantage of this LED stripe is that the wanted color is already mixed in the LED. The usual lightbeams of the particular colors do not show any more.

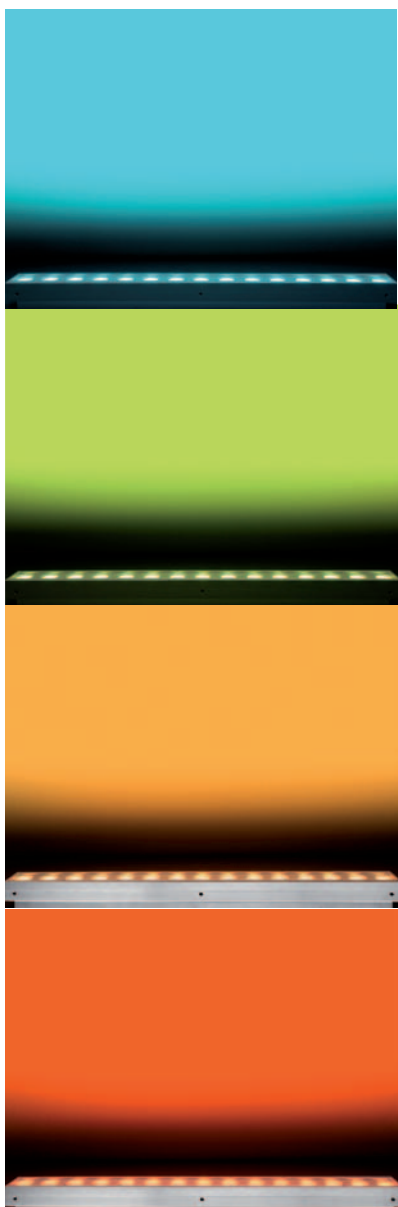

Because of the compact design colorPIX stripe 30 (15) fullcolor can be applied individually, particularly for lighting areas or as an effect light. ColorPIX stripe 30 (15) fullcolor is available with a 22° and a 30° angle of reflected beam.
